How we develop Kumami

One product spec, passed back and forth. Every change is written down before it's built, and every build is written down after.

Andrew · development · Rachelle · product · CEO · kept informed

Workflow v2 · 18 Oct 2026

1 · ANDREW SHARES

v1.14 Build version

Describes exactly what the website does **today**. Shared as its own Google Doc.

→

2 · RACHELLE TESTS & REQUESTS

v1.15 Request version

- Tests the website against v1.14
- Copies it to v1.15 and edits what should change
- Marks each changed section `(To be developed)`
- Lists every change in the **Release notes**, per product

→

3 · ANDREW DEVELOPS

Each change, the same steps

a Put on the Kumami roadmap
b Clarify questions answered
c Design options; one picked
d Plan, then build
e Automated tests
f Tested in a real browser
g Andrew checks it
h Spec text updated

→

4 · ANDREW SHARES

v1.20 New build version

The website as built now. Changes that were built lose their label; anything not built yet keeps `(To be developed)` with a reason.

repeat: Rachelle tests v1.20, and so on

EXAMPLE

Rachelle wants the Plus delay longer

`v1.15` In **Plus · Flow Radar** she changes "delayed 15 minutes" to "delayed 30 minutes", marks the section `(To be developed)`, and adds to the Release notes: *"Plus · Flow Radar: delay 15 → 30 min."*

`dev` Andrew builds it, it's tested in the browser, and he checks it on the dev site.

`v1.20` The section now says 30 minutes, without the label. Release notes: *"Built from v1.15: Plus · Flow Radar delay is now 30 min."*

RULES

- **One file per version** in the shared Drive folder. A version is never edited after it's shared; fixes go into the next one.
- **The next version takes the next free number.** Build versions can skip numbers when there were internal builds in between (v1.15 → v1.20).
- **Build versions describe only what is live.** Anything not built is marked `(To be developed)`.
- **Release notes are the change log:** one line per change, grouped by product (Basic, Plus, Pro, Payments…).

WHO DOES WHAT

Rachelle

Tests each build version; writes the request version with labels and release notes.

Andrew

Develops the requests, checks every change, shares the next build version, and decides when it goes live on kumami.world.

CEO

Gets each build version: always the current picture of the product.
